Given the rainfall in recent weeks that caused a rapid ripening of the bean, the coffee growers of the Isle of Youth accelerate the harvesting of the aromatic bean in order to collect the maximum of the planned volume. According to a note published on the website of the Radio Caribe station, for that purpose, a second brigade with 40 workers was incorporated into the contest, but if necessary it is expected to reinforce the task with the incorporation of more harvesters, said Narciso Díaz Alonso. of the coffee branch. The manager announced that to date the collection of more than 1,300 cans of the cherry tree has been reported, and acknowledged in that figure the contribution of the beneficial owners of the territory with significant volumes. He also pointed out that they are currently carrying out the second collection pass in the plantations of the Mella Cítricos coffee pole, where the largest area of this crop is concentrated and that it will be decisive in the production of the 30 tons committed for this contest.
