Innovation, science and participation become key to transforming the current socioeconomic scenario of the country, said Liván Fuentes Álvarez, a deputy for Isla de la Juventud to the Cuban Parliament. The intervention of Deputy Prime Minister Alejandro Gil Fernández, on the behavior of the economy in 2021 in the VII Period of Sessions of the IX Legislature, identified as obstacles to the development of the nation the impact of the pandemic and the worsening of the economic, commercial and economic blockade.

It is then up to the different management structures of this instance to manage the efficiency and productivity in the generation of goods and services that satisfy the increasingly growing needs of the people, said the also president of the Municipal Assembly of the Popular power.

It meant that making better use of endogenous resources and increasing local production will enable a fair balance between supply and demand, control inflation due to speculative prices and gradually recover commercial circulation, an effective mechanism to guarantee financial balance.

The Cuban economy has in its sights the socialist state enterprise, established in measures that condition its improvement, so working with synergy, efficiency and intelligence is key to recovering strategic lines that substitute imports and generate exportable items,

~~he said.~~

He added that given the lack of agricultural products, the application of science and innovation, popular knowledge and the generation of collective ideas, added to the 63 measures approved for the agricultural sector, are the path to favoring alternatives for solutions to problems that afflict to the population.

But there is ignorance of the measures and their ways for a correct implementation, which prevents at the moment from showing superior results, therefore, it is up to us to be more emphatic in the training of the different management structures of the territory and of the productive bases, he pointed out.

He stressed that having a municipal development strategy until 2030 makes possible the fulfillment of the economy plan in the face of food and nutritional sovereignty and the consolidation of municipal autonomy.

Our territory is in better conditions to face the third process of accountability of the delegates to their electors, with a high percentage of proposals solved from previous mandates, derived from the first and second processes and included in the economy plan, referred.

He said that the special municipality with the assistance of the majority of the locals will work tirelessly in the recovery of the economy, for which the participation of the neighborhoods and communities and the support of the entities that do science will be essential.

Innovation, science and key participation to transform the economy, said deputy pine
